

PPWR Supplier Statement

Foresco Group B.V. hereby provides this supplier statement for its packaging products in accordance with the applicable requirements of Regulation (EU) 2025/40 on Packaging and Packaging Waste (PPWR), based on available product data, supplier information and current regulatory guidance at the date of issue.

Product description

Foresco supplies wooden transport packaging. We supply both new and repaired/reused packaging (including pallets, pallet collars) in various dimensions and specifications.

Intended use

Wooden packaging (including pallets and pallet collars) supplied by Foresco are intended exclusively for industrial and commercial logistics applications, including the transport, handling and storage of goods throughout the supply chain. They are **not intended for direct contact with food** and should only be used for transporting or storing packaged products.

Material composition

Foresco packaging products are predominantly composed of a single primary material, namely wood (including solid wood, wood chips and other wood (pulp) based materials, depending on the product design). Any secondary materials, such as steel fasteners, adhesives, coatings, labels or other ancillary components, represent less than 5% of the total packaging weight and do not alter the classification of the packaging according to its predominant material.

Substances of concern

Based on current knowledge and information provided by our suppliers, our products do not intentionally contain substances of concern in concentrations exceeding the applicable legal thresholds.

Our products comply with the applicable requirements of Regulation (EC) No. 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (**REACH**), including subsequent amendments. Our products can contain heavy metals and/or formaldehyde. Their concentration and emissions comply with the provisions of REACH.

The general terms and conditions of sale apply to this delivery. Please see foresco.eu/algemene-voorwaarden.

Our products are intended exclusively for industrial and commercial logistics applications and are not intended for direct contact with food. Consequently, the PFAS limits established for food contact materials do not apply to these products.

None of the following substances are intentionally added during the production or repair processes.

- Per- and polyfluoroalkyl substances (PFAS)
- Mineral oil hydrocarbons (MOH)
- Bisphenol A (BPA)
- Heavy metals

Based on a documented low-risk assessment, including supplier information, material knowledge, supply chain characteristics and contamination risk evaluation, no analytical testing is considered necessary.

Foresco remains committed to monitoring regulatory developments and continuously improving the safety and environmental performance of its products.

Recycled content in plastics

The PPWR recycled content requirements apply only to plastic packaging components. Our products are primarily composed of wood and steel and/or cardboard; any plastic components representing less than 5% of the total weight of the packaging unit are exempt from the PPWR recycled content targets.

Recyclability

Our products are primarily made of wood, wood chips, cardboard and steel and can be recycled through established wood and metal recycling streams at the end of their service life. Steel nails can be readily separated from the wood during mechanical recycling processes and recycled through established metal recycling streams.

The harmonised PPWR methodology for calculating the recyclability rate has not yet been published by the European Commission; therefore, no official PPWR recyclability rate can currently be declared.

Reusability

Our wooden products are designed for repeated use and can be repaired, refurbished and returned to service multiple times throughout their lifecycle. All major components support reuse, contributing to a circular packaging system.

Product labeling

In accordance with the applicable PPWR provisions and the exemptions provided for transport packaging, supplier information and product identification are provided on the delivery note accompanying the product. The delivery note enables identification of the supplier, product type and batch information, ensuring traceability without the need for individual product marking.

This statement has been prepared in good faith based on the information available at the date of issue and is intended solely to support compliance with applicable requirements of Regulation (EU) 2025/40 on Packaging and Packaging Waste (PPWR).
